No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

                                New polypeptide, that is a functional equivalent of ERCOA3 (Estrogen Receptor Coregulator 3), is useful in inhibiting or reducing tamoxifen or estrogen-induced proliferation of cancer cells and in treating
                                                                                                                                                                                                                                                                                                                                                               GGGCTCTGGACTGGGGCTAGGGGAAGGCCAGGAGGGGGGGAATTGGGCCCGAGGGCCAGGCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         382
                                                                                                          The invention relates to a ERCOA3 (Estrogen Receptor Coregulator 3) protein and encoding polynucleotides. ERCOA3 can be used to inhibit or reduce tamoxifen or estrogen induced proliferation of cancer cells, by reduced activity of ERCOA3, and for detecting cancer cells that are tamoxifen resistant, or to treat osteoporosis, by increasing levels of ERCOA3 in cells. The encoding polynucleotide can be used to inhibit translation of a mRNA encoding ERCOA3. ERCOA3 acts as a coregulator protein and can bind to the estrogen receptor to activate a molecular or cellular response in the cell. The present sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                           GlyLeuTrpThrGlyLeuGlyGluGlyGluGlyGluGlyGlyIleGlyProGluGlyGlnAla 40

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consistent of (II) is useful in gene therapy techniques to restore normal colypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and (II) and (II) and subject treating disorders in volving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in dispensible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amine and to produce other types of data and products dependent on DNA and coning sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this parent did not appear in the printed specification, but was obtained in the form of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the

The invention relates to novel proteins involved in the biosynthesis of polyketide dorrigocin (DORR) or lactimidomycin (LACT) biosynthesis by microorganisms. Sequences of the invention allow direct manipulation of dorrigocin, lactimidomycin and related chemical structures via chemical engineering of the enzymes involved in the biosynthesis of dorrigocin and lactimidomycin. They are useful for introducing chemical handles into normally inert positions that permit subsequence chemical modifications the invention can also be used to generate a focused library of analogues around a polyketide lead candidate to fine-tune the compound for optimal properties. They are useful for generating antibodies specific for the polyketide biosynthesis. The present sequence is Streptomyces platensis subspecies rosaccus DORR ORF6 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated or purified polypeptide involved in biosynthesis of polyketide dorrigocin or polyketide lactimidomycin, useful for preparing dorrigocin or lactimidomycin.
                                                                                                                                                                                                                                                                                                                                                                      Polyketide biosynthesis; dorrigocin; DORR; lactimidomycin; LACT; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 24081 BP; 3269 A; 9645 C; 8186 G; 2981 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                 Streptomyces platensis subspecies rosaceus dorrigocin ORF6 DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel proteins involved in the biosynthesis of polyketide dorrigocin (DORR) or lactimidomycin (LACT) biosynthesis by microorganisms. Sequences of the invention allow direct manipulation of dorrigocin, lactimidomycin and related chemical structures via chemical engineering of the enzymes involved in the biosynthesis of dorrigocin and lactimidomycin. They are useful for introducing chemical handles into normally inert positions that permit subsequence chemical modifications and facilitate the development of polyketides. The genes and proteins of the invention can also be used to generate a focused library of analogues around a polyketide lead candidate to fine-tune the compound for optimal properties. They are useful for generating antibodies specific for the polyketide biosynthesis. The present sequence is Streptomyces platensis subspecies rosaceus DORR DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28 uGlyGlnGluGlyGlyIleGlyProGluGlyGlnAlaSerProThrProAspCysAlaSe 48
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated or purified polypeptide involved in biosynthesis of polyketide dorrigocin or polyketide lactimidomycin, useful for preparing dorrigocin or lactimidomycin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SeralaGlyCysGlyPheAlaAspAlaHisTrpThrGlyLeuTrpThrGlyLeuGly-Gl 28

AAH52093 to AAH52303 encode the human secreted proteins given in AAG81242 to AAG81453. The secreted proteins can be used for directing the secretion of proteins of interest from a host cell including bacteria, fungal cells, and cultured higher eukaryotic cells. The present invention also describes fusion proteins, where a secreted protein of the invention is operably linked via a peptide bond or peptide linker to a second protein selected from the group consisting of maltose binding protein, an immunoglobulin constant region, a polyhistidine tag and a peptide given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CysGlyArgProArgArgValSerAlaGlyCysGlyPheAlaAspAlaHisTrpThrGly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated polypeptide for directing secretion of proteins of interest a host cell including, e.g. bacteria, includes contiguous amino acid residues of polypeptide with specified amino acids.

                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the coding sequence for humanised mutant fluorescent protein, Mutl, from non-bioluminescent Anemonia sulcata. The fluorescent protein has applications in fluorescent labelling, as fluorescent markers for gene expression and protein localisation studies, and in fluorescence resonance energy transfer (FRET) reactions. The coding sequence may be used as a source or primers and probes for identifying related proteins

recombinant means and antibodies specific for the protein of the invention. The antibody may be used for detecting the FRO proteins of the invention and may be used to modify their activity. Polyucleocides may be used to solate or a cDNA library to isolate the full-conference in the solate other cDNA, to construct hybridisation probes for a cDNA library to isolate the full-conference or malysis of individuals with genetic disorders, in assays to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knock-out animals which in turn are useful in the conference identification, and tissue typing. The PRO polypeptides are useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The sequences may also be used to detect overexpression on PRO polypeptides in concerous tumours and for screening for differentially expressed genes using microarray technology. The present sequence represents a cDNA encoding a human PRO protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, gene, ss, PRO, secreted polypeptide, transmembrane polypeptide; tumour necrosis factor-alpha, TNF-alpha, blood; chondrocyte cell; tumour; adenaal, lung; colon; breast, prostate; rectum; carvix; liver; cancer; microvascular endothelial cell; endothelial cell tube formation; sports-related joint problem; articular cartilage defect; osteoarthritis;

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for clecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, cervical and liver tumours). The polypucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation and for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumantoid arthritis. This sequence represents a human PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated PRO1313, PRO20080 or PRO21383 polypeptide useful for stimulating proliferation of human microvascular endothelial cells, and PRO6018 polypeptide useful for stimulating proliferation of chondrocyte
                                                                                                                                                                                                                                                                                                                                  ž
                                                                                                                                                                                                                                                                                                       JC;

The invention relates to an isolated secreted/transmembrane (PRO) polypeptide, having at least 80% sequence identity to a sequence selected from any one of the 57 amino acid sequences given in specification, or to a sequence encoded by a nucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCC accession numbers given in specification, or a sequence having at least 80% identity to PRO with or without its associated signal peptide, an extracellular domain of PRO with or without its associated signal peptide. Also included are vectors, transformed host cells, anti-PRO antibodies, the nucleic acids encoding PRO, PRO fusion proteins, inducing endothelial cell tube formation (by administering PRO281, PRO150, PRO189, PRO4499, PRO6308, PRO6500, PRO1207, PRO1207, PRO250933 or PRO34274 polypeptide or its agonist) and

```

an oligonucleotide probe derived from any one of the above nucleotide sequences. PRO6018 polypeptide is useful for stimulating the proliferation of differentiation of condroyer cells. PRO1313, PRO20080 and PRO6138 polypeptides are useful for stimulating the proliferation of human microvascular endothelial cells. PRO6071, PRO4487 and PRO6006 to polypeptides are useful for inhibiting the proliferation of human microvascular endothelial cells. PRO 6071, PRO4487 and PRO6006 detecting the presence of tumour in a mammal, including tumours of lung, colon, breast, prostate, rectal, kidney and liver. PRO281, PRO1560, PRO189, PRO6499, PRO6508, PRO6000, PRO10275, PRO21207, PRO2031 and PRO34274 polypeptides are useful for inducing endothelial cell tube formation. PRO or the antibody are useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide. The oligonucleotide probes are useful for isolating genomic and cDNA uncleotide probes, for measuring or detecting the expression of an associated gene, and as antisense probes. PRO nucleic acid is useful as hybridisation probe, in chromosome and gene mapping, in the generation of present sequence are useful as therapeutic agents, e.g. vaccines. The present sequence arecades a PRO protein. 197 312 GAGGCACCGTCAAACTGCAGTTCGACATGATGCGCGCCTGCAACCTGGTGGCCACGGCGG 371 372 cecrcaccecaeccaecricacericaceridenceiaecridenceecerecererereren 431 432 CCGACGCCCCGTGCGAGGAGGAGGCCATGCCGCTGCATTCCAACTGGCGAGTTTTGTCC 491 198 TGGTGGACGGGACCCGGGGAGGGCCGA-----GCCCTGGGGCCAGAGCCGGCCAGGTGG 251 25 37 44 ------SerAlaSerArgTrpProTrpSerAla-GlyLeuThrValAr 66 gAspArgProGlnLeu------GlyGluLeuCysMe 76 CysGlyArgProArgArgValSerAlaGlyCysGlyPheAlaAspAlaHisTrpThrGly -----GlyGlnAlaSerProThrPro ---TrpProArg--ss; gene; human; PRO; secreted protein; transmembrane protein; endothelial cell tube formation; chondrocyte cell differentiation; Human cDNA encoding secreted/transmembrane polypeptide PRO21434. The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the projection or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. lung, colon, breast, prostate, rectal, kidney and liver tumoure). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antiense RNA and DNA and incommended and pene mapping, in generating entier.

CC polypeptides by recombinant techniques and in generating either can animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such a tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells and for inducing endothelial cell tube incomment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ||| ||| |||   |||   |||   |||   |||   ||   ||   ||   ||   ||  ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||  ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||   ||

The invention relates to an isolated secreted/transmembrane (PRO)

polypeptide, having at least 80% sequences identify to a sequence selected

from any one of the 57 amino acid sequences given in specification, or to

a sequence encoded by a nucleic acid molecule selected from any one of

the nucleic acids deposited under any of the ATCC accession numbers given

concerning its associated signal peptide, an extracellular domain of PRO

lacking its associated signal peptide, Also included are vectors,

transformed host cells, anti-PRO antibodies, the nucleic acids encoding

proportion proteins, inducing endochelial cell tube formation (by

administering PROSIS, PROSISS, PROSISS, PROSISS, PROSIOS, PROSIOSO,

proliferation or differentiation of chondrocyte cells. PROSISS,

an oligonucleotide probe derived from any one of the above nucleotide

proliferation or differentiation of chondrocyte cells. PROSISS,

and pROSISS polypeptides are useful for stimulating the proliferation of

proliferation of differentiation of chondrocyte cells. PROSISS,

and pROSISS polypeptides are useful for stimulating the proliferation of

microvascular endothelial cells. PROSON, PROSON,

polypeptides are useful for inhibiting the proliferation of human

microvascular endothelial cells. PROSON, PROSON,

proputides are useful for inhibiting the proliferation of human

microvascular endothelial cells. PRO polypeptides are useful for

medicament for treating a condition responsive to PRO polypeptide. The

colon, breast, prostate, rectal, kidney and liver. PROSEN,

PROSEN, PROSEN, PROSEN, PROSEN, PROSEN, PROSENT, PROSENT,

prostate, prostate, rectal, kidney and liver. PROSEN,

prostate, prostate, rectal, kidney and liver proparation of a

molectide sequences, for masuring or detecting the expression of a

nucleotide sequences, for masuring or detecting the expression of a

nucleotide sequences, for masuring or detecting the expression of a

nucleotide sequences probes. PROSENT, PROSENT, PROSENT, PROSENT, PROSENT, PROSENT, PROSENT, PROSENT, PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated PRO polypeptides e.g. PRO281 and PRO1560, useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide, and as therapeutic agents e.g. vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Grimaldi JC;

```
The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The transmembrane polypeptides and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondroove cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a

```

```
medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalasseamias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polynucleotide of the invention.

UJ-CF-ENI is a normalized cDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis
Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-866,
1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA as ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTGCTCAGGT.

UI-CF-ENI is a normalized cDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis
Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-GT primer containing a Not I site. Double stranded CDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTGCTCAGGT.

with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT733-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The Equence tag for this library is GTAAAGCGTC.

NGI CGAP Ct1 is a normalized CDNA library containing the following tissue(s): Osteoarthritic Cartilage The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was prined with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EcoR I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumor Gene Index

AGENCOURT 6553891 NIH_MGC_71 Homo sapiens cDNA clone IMACE:5555626
5', mRNA sequence.
BM806108
adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is TAG_TISSUE-osteoarthritic cartilage TAG_LIB-UI-H-BUI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1084

Squence 5304, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICATION:

APPLICATION WULLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

UI-CF-ENI is a normalized CDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis

Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-866, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) 18 tail. The sequence tag for this library is CTGCTCAGGT.
